## CERTIFIED FAMILY FOREST

*Fairsing Vineyard was established in the summer of 2005, with the purchase of approximately 200 acres of harvested forestland.*

*Before vineyard development, over 30-acres of mature forest were retained and another 80 acres returned to its natural habitat with the planting of 18,000 conifers, 3,000 deciduous trees, and 6,000 native shrubs.*

*Fairsing earned status as a Certfied Family Forest in 2013 via compliance with ecological and economic sustainable forest management standards established by the American Tree Farm System.*

*Fairsing continues to expand upon its commitment to the forest with the planting of new trees including Pacific dogwood, incense cedar, and conifers to complement the forest's existing understory.*

## OREGON WHITE OAKS PRESERVATION

*Fairsing is a founding signatory of the Willamette Valley Oak Accord - a voluntary conservation agreement by landowners to nurture, preserve, and restore native Oregon white oak habitat.*

*Since its launch in 2017, Fairsing has planted oaks of varied maturity across the estate including over 1,000 bare root saplings and continues to collect viable acorns to nurture into healthy seedlings.*

## NESTING BOXES and RAPTOR RESCUE

*Birds of prey provide natural pest control across the estate. Fairsing welcomes these winged partners by positioning high perches in the vineyard and by augmenting raptor habitat with the installation of nesting boxes in the forest and green spaces.*

*Fairsing supports local rescue organizations with the care, protection, and release of rehabilitated raptors.*

## POLLINATOR HABITAT

*With just 22 percent of Fairsing planted to vines, a majority is home to large swaths of forested acres, a family orchard, native grasses, gardens, and wildflower meadows.*

*In addition to expanding its honeybee apiary, Fairsing hosts Mason bee incubators across the estate to assist with breeding and nurturing the proliferation of the friendly pollinators.*

*Fairsing is a partner in the Oregon Bee Project, a cooperative effort initiated by the Oregon State University (OSU) Extension Service to protect and care for bee species. As a participating vineyard, Fairsing is certified as Bee Friendlly in recognition of ongoing initiatives to restore and enhance pollinator habitat.*

## SOIL HEALTH and BIODIVERSITY

*Fairsing is a diverse ecosystem and a micro-watershed with numerous streams supplying the nearby Chehalem Creek.*

*Diverse cover crops are cultivated across the landscape to contribute to soil nutrition, prevent erosion, and improve soil health. Tillage is minimized to protect soil structure and reduce emissions.*

## HOLISTIC FARMING and COMPOST

*Fairsing strengthens its soil health and microbiome with the broadcast application of nutrient-dense organic compost. Formulated and cured on site, amending vineyard soils with compost matter is integral to microbial diversity and soil moisture retention.*

## NATIVE FLORA and FIBERS

*Native wildflowers, grasses, legumes, flax, and bulbs are planted and nurtured across the estate.*

*Fairsing honors the original stewards of this landscape with the mindful cultivation of native species and the intentional sharing of bulbs and wildflower seed mixes with others.*
